1. Introduction

This document only includes the examples given in the manual; each one of these has been explained in full detail there.

2. Feature demonstration

```
#let theorem = thm-plain("Theorem")
```

```
#theorem("Euclid")[  
  There are infinitely many primes.  
] <euclid>
```

Theorem 2.1 (Euclid). *There are infinitely many primes.*

```
#let lemma = thm-plain(  
  "Lemma",           // head  
  counter: "Theorem", // same as that of Theorem  
                    // options for styling the block  
  fill: rgb("#e8e8f8"),  
  outset: 0.7em,  
  padding: (y: 0.5em)  
)
```

```
#lemma[  
  If  $n$  divides both  $x$  and  $y$ , it  
  also divides  $x - y$ .  
]
```

Lemma 2.2. *If n divides both x and y , it also divides $x - y$.*

```
#let corollary = thm-plain(  
  "Corollary",           // head  
  base: "Theorem",       // base - use the theorem counter  
)
```

<pre>#corollary(numbering: "1.1")[If n divides two consecutive natural numbers, then $n = 1$.]</pre>	<p>Corollary 2.2.1. <i>If n divides two consecutive natural numbers, then $n = 1$.</i></p>
--	---

2.1. Proofs

```
#let proof = thm-proof("Proof")
```

<pre>#proof([of @euclid])[Suppose to the contrary that p_1, p_2, \dots, p_n is a finite enumeration of all primes. Set $P = p_1 p_2 \dots p_n$. Since $P + 1$ is not in our list, it cannot be prime. Thus, some prime factor p_j divides $P + 1$. Since p_j also divides P, it must divide the difference $(P + 1) - P = 1$, a contradiction.]</pre>	<p><i>Proof of Theorem 2.1.</i> Suppose to the contrary that p_1, p_2, \dots, p_n is a finite enumeration of all primes. Set $P = p_1 p_2 \dots p_n$. Since $P + 1$ is not in our list, it cannot be prime. Thus, some prime factor p_j divides $P + 1$. Since p_j also divides P, it must divide the difference $(P + 1) - P = 1$, a contradiction. ■</p>
---	--

<pre>#theorem[There are arbitrarily long stretches of composite numbers.] #proof[For any $n > 2$, consider $n! + 2, \quad n! + 3, \quad \dots, \quad n! + n$ #qedhere \$]</pre>	<p>Theorem 2.1.1. <i>There are arbitrarily long stretches of composite numbers.</i></p> <p><i>Proof.</i> For any $n > 2$, consider</p> $n! + 2, \quad n! + 3, \quad \dots, \quad n! + n \quad \blacksquare$
---	--

2.2. Suppressing numbering

```
#let conjecture = thm-plain(
  "Conjecture",
  numbering: none
)
```

<pre>#conjecture[The numbers 2, 3, and 17 are prime.]</pre>	<p>Conjecture. <i>The numbers 2, 3, and 17 are prime.</i></p>
--	--

<pre>#lemma(numbering: none)[The square of any even number is divisible by \$4\$.] #lemma[The square of any odd number is one more than a multiple of \$4\$.]</pre>	<p>Lemma. <i>The square of any even number is divisible by 4.</i></p> <p>Lemma 2.2.1. <i>The square of any odd number is one more than a multiple of 4.</i></p>
<pre>#lemma(number: "42")[The square of any natural number cannot be two more than a multiple of 4.]</pre>	<p>Lemma 42. <i>The square of any natural number cannot be two more than a multiple of 4.</i></p>

2.3. Limiting depth

```
#let definition = thm-def(
  "Definition",
  base_level: 1           // take only the first level from the base
)
```

<pre>#definition("Prime numbers")[A natural number is called a <i>_prime number_</i> if it is greater than \$1\$ and cannot be written as the product of two smaller natural numbers.] <prime></pre>	<p>Definition 2.1 (Prime numbers). A natural number is called a <i>prime number</i> if it is greater than 1 and cannot be written as the product of two smaller natural numbers.</p>
<pre>#definition("Composite numbers")[A natural number is called a <i>_composite number_</i> if it is greater than \$1\$ and not prime.]</pre>	<p>Definition 2.2 (Composite numbers). A natural number is called a <i>composite number</i> if it is greater than 1 and not prime.</p>

```
#let example = thm-rem(
  "Example",
  numbering: "1.1"
)
```

<pre>#example(base_level: 4)[The numbers \$4\$, \$6\$, and \$42\$ are composite.]</pre>	<p><i>Example 2.3.0.0.1.</i> The numbers 4, 6, and 42 are composite.</p>
---	--

2.4. Custom formatting

```
#let proof-custom = thm-box(
  "Proof",
  titlefmt: smallcaps,
  bodyfmt: body => [
```

```

    #body #h(1fr) $square$ // float a QED symbol to the right
  ],
  numbering: none
)

```

<pre> #lemma[All even natural numbers greater than 2 are composite.] #proof-custom[Every even natural number \$n\$ can be written as the product of the natural numbers \$2\$ and \$n/2\$. When \$n > 2\$, both of these are smaller than \$2\$ itself.] </pre>	<p>Lemma 2.4.1. <i>All even natural numbers greater than 2 are composite.</i></p> <p>PROOF. Every even natural number n can be written as the product of the natural numbers 2 and $n/2$. When $n > 2$, both of these are smaller than 2 itself. \square</p>
--	--

```

#let notation = thm-env(
  "notation", // counter
  none, // base - do not attach, count globally
  none, // base_level - use the base as-is
  (name, number, body, color: black) => [
    // fmt - format content using the environment
    // name, number, body, and an optional color
    #text(color)[#h(1.2em) *Notation (#number) #name*]:
    #h(0.2em)
    #body
    #v(0.5em)
  ]
).with(numbering: "I") // use Roman numerals

```

<pre> #notation[The variable \$p\$ is reserved for prime numbers.] #notation("for Reals", color: green)[The variable \$x\$ is reserved for real numbers.] </pre>	<p>Notation (I) : The variable p is reserved for prime numbers.</p> <p>Notation (II) for Reals: The variable x is reserved for real numbers.</p>
--	--

<pre> #lemma(title: "Lem.", stroke: 1pt)[All multiples of 3 greater than 3 are composite.] </pre>	<p>Lem. 2.4.2. <i>All multiples of 3 greater than 3 are composite.</i></p>
---	---

2.5. Labels and references

Recall that there are infinitely many prime numbers via <code>@euclid</code> .	Recall that there are infinitely many prime numbers via Theorem 2.1 .
You can reference future environments too, like <code>@oddprime[Cor.]</code> .	You can reference future environments too, like Cor. 2.6.1 .
<pre>#lemma(supplement: "Lem.", renumbering: "(1.1)")[All primes apart from \$2\$ and \$3\$ are of the form \$6k\$ plus.minus 1\$.] <primeform></pre> <p>You can modify the supplement and numbering to be used in references, like <code>@primeform</code>.</p>	<p>Lemma 2.5.1. <i>All primes apart from 2 and 3 are of the form $6k \pm 1$.</i></p> <p>You can modify the supplement and numbering to be used in references, like Lem. (2.5.1).</p>

2.6. Overriding base

```
#let remark = thm-rem(
  "Remark",
  base: "heading",
  numbering: "1.1"
)
```

<pre>#remark[There are infinitely many composite numbers.]</pre>	<i>Remark 2.6.1.</i> There are infinitely many composite numbers.
<pre>#lemma[All primes greater than \$2\$ are odd.] <oddprime></pre> <pre>#remark(base: "Theorem")[Two is a <i>_lone prime_</i>.]</pre>	<p>Lemma 2.6.1. <i>All primes greater than 2 are odd.</i></p> <p><i>Remark 2.6.1.1.</i> Two is a <i>lone prime</i>.</p>
